

Prepare your business to switch to the nbn™ broadband access network

The nbn™ access network is being rolled out across Australia and helping drive business growth. Whether your business is large or small, you should develop a migration plan to help make a smooth transition to a digital future.

Many businesses are ready to connect

Now is the time to prepare your business to help reduce the risk of business disruption caused by the disconnection of your existing landline phone and internet services*.

It's also the ideal time to plan for the digitisation of your business and develop a strategy for business transformation to help you capitalise on all the opportunities the nbn™ access network has to offer.

We're here to help

Depending on the size of your business, migrating to the nbn™ access network can be a complex and time-consuming process. As an nbn™ business accredited adviser, we've been fully trained and can assist you in migrating your business to the nbn™ access network.

Overleaf you'll find a checklist of the services, equipment and systems that could be affected and that may need to be managed as part of your migration. We can help you choose which of the wholesale business grade nbn™ products are suited to your business, and assist in liaising with your various providers to ensure a robust migration plan is put in place. We can also help you develop a digital roadmap for the future.

Contact

We look forward to supporting you in your migration to the nbn™ access network.

* Services provided over the nbn™ broadband access network will be replacing phone and internet services provided over most of the existing landline networks, including copper and the majority of HFC networks within the fixed line footprint. Services provided over existing fibre networks (including in-building, health and education networks) and some special and business services may not be affected. To find out if your services will be affected, please contact your current phone or internet provider. For more information, visit nbn.com.au/switchoff or call 1800 687 626.

Your checklist

Businesses vary greatly in terms of their preparation for migration to the **nbn**[™] access network. The list of services, systems and equipment that may be affected is shown below.
